Water Reuse Strategies Help to Improve Your Bottom Line

Sustainable water management strategies can significantly benefit the bottom line of power utility operations.

Benefits of our Services

> Long-term operational efficiency
> Reliable, consistent

Municipal secondary effluent reused for cooling water and sidestream filtration are just two examples of how power utilities are trimming costs and achieving sustainable results (read more here).

Veolia Can Help

Veolia has expertise with integrated water management, offering a portfolio of more than 350 technologies, proprietary water treatment chemistry, and a staff of experienced water management professionals.

A Stepwise Approach

Our service begins with an evaluation to discover how water is used and where we can look for opportunities to reduce and reuse the water currently being consumed. After developing a comprehensive water balance, we review the water source, quality, volume and cost within each process area.

A collaborative plan is designed, outlining how Veolia's engineering expertise, robust technology and chemistry, as well as needed support services can be integrated into a sustainable solution to achieve your financial, environmental and social objectives.

Why Wait?

water supply
> Exceptional environmental performance
> Health & Safety compliance
> Robust, proven technologies
> Trained, on-site service personnel

Case Study
